Integrated Acoustic Solutions

Prebuilt Off-Site Studios

Integrated Acoustic Solutions

Recording & Broadcasting Studios Prebuilt Off-Site

The Process

Build Off-Site

- Advanced Site Survey
- Planning and Design
- Up to 70% of Studio Prebuilt Off-site

Install Onsite

- Fast Installation Time
- Integrated Electrics, A/C and Cable Ducting
- Room Acoustic Treatment

Testing & Certification

- Full Acoustic Testing
- Sound Insulation, Background Noise, Room Acoustics
- Monitor Set-up & Alignment

Why Prebuilt Off-Site?

- With up to 70% of your studio prebuilt off-site, in our purpose built factory, **installation time is reduced** to the absolute minimum; meaning you get your new facility up and running in the shortest possible time frame.
- Prebuilt off-site results in **less disruption** to your existing business. This means less noise, less dust and less hassle onsite.
- Due to the modular nature of our construction techniques, it is possible to **deconstruct your studio** facility and remodel, or move it to another location. This flexibility allows you to keep all of your options open.
- Factory build allows for better use of raw materials, resulting in **reduced costs** and minimises the impact on the environment.
- **In-depth planning** and detailing ensures all project issues are identified and addressed in advance, so you get exactly what you expect.
- Our **integrated design** captures all elements critical to the successful operation of your new facility including electrics, a/c, cable ducting etc. Just install your equipment and get to work.
- Our experienced and skilled crew ensures a professional installation **delivered on time** and to program.
- Emphasis is placed on the use of **renewable/ recycled materials** and energy efficient equipment, which is good for the planet and your operating costs.
- The use of prebuilt components **simplifies onsite health & safety**.
- Full **post-completion testing** is undertaken to analyse the entire acoustic performance of your new facility, including sound insulation, room acoustics and background noise.
- Our **monitor set-up and alignment service** integrates your selected speaker system with your room acoustics, ensuring accurate sound monitoring and no nasty surprises.
